ates. *Characteristics of Physicians* is related to other AMA-CHSRD publications: *Physician Manpower and Medical Licensure in the United States* and *Medical School Alumni*. This publication differs from these in that more characteristics are described at smaller geopolitical units of analysis. Completeness and detail do, however, have their cost. Of fifty-one volumes, one for each of the States and District of Columbia, are required in order to assemble these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education and Welfare (DHEW). The *AMA Physician Characteristics* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract #2-78-0163 with the Health Resources Administration of DHEW has provided the financial support to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Chief of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official policy of the Department of Health, Education and Welfare.

Characteristics of Physicians was conceived by AMA-CHSRD partially in response to passage of the National Health Planning and Resources Development Act of 1971 (#93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of federal legislative action for several decades. In 1955, four separate pieces of legislation each attempted to effect a different distribution of health care resources have been enacted by the federal government. The most recent of these is the Health Pro-

gram for Designating Shortage Areas approved in 1974. Those areas designated as such really experienced shortages? These issues and related ones have not yet been resolved.

The *Characteristics of Physicians* series is designed to meet some of the data requirements inherent in the market approaches to resource distribution and allocation. Assessment of specialty and local distributions, determination of physician shortages, and planning to ensure that health care needs are met require detailed data on relevant characteristics of the physician population. Data in the COP Series are available with the expressed hope that they will be coupled with intelligent analysis and careful interpretation.

Use of these data, however, will not be restricted to policy makers. In addition, individual physicians may utilize *Characteristics of Physicians* for making decisions on specialty and migration decisions, and medical societies may consult *Characteristics of Physicians* to assess the needs of types of continuing medical education programs. It should be of interest to a large proportion of physicians in the region. Researchers in health care and in the social sciences have also repeatedly expressed a need for this type of data provided. Therefore, *Characteristics of Physicians* is being widely distributed in an attempt to meet the repeatedly expressed needs of various groups.

The efficacy of the market as an allocation and distributive mechanism for health care resources is gaining supporters. It will be some time, however, before the desired incentives can be reintroduced into the health care market. Until that time, the CHSRD is attempting to ensure that all data relating to health personnel are based on the most available and, thus, introduce as few distortions as possible.

Lynn E. Jensen
Project Director and
Director, Center for Health
Services Research and Development

al from its conceptualization in 1976 to its completion. Special appreciation goes to Lynn E. Jensen, of the Center for Health Services Research and Development, and Project Director, for his efforts in making the project possible and in assuring the availability of resources necessary to its successful completion. Gene Roback of the AMA Survey Data Center provided helpful advice and comments during conception and throughout the term of this project. Anne Healy and Raymond Healy, from the AMA Division of Computer and Information Services, provided the programming expertise needed to complete

numerous phases of publishing 50 seemingly indistinguishable state editions; Dorothy F. Barnette Collins assumed day-to-day administrative tasks.

Finally, the authors also wish to thank H. Stambler, Director, Division of Manpower, Bureau of Health Manpower, Department of Education, and Welfare, and Project Officer, for his efforts to make publication and distribution of the volumes possible. Special appreciation goes to Kramer, Contract Liaison, for her work in coordinating publication and dissemination activities for the

Medical Association publication to present data for the 205 health service areas (HSA's) designated under the National Health Planning and Resources Development Act of 1974 (PL #93-641). There is a separate volume of COP for each of the fifty states and the District of Columbia. Each presents state-specific detailed data for health service areas, demographic county groups, and counties, as well as summary national data for comparative purposes. Thus, the series provides the only compatible data base on physicians across all areas and should be of significant use to practitioners and researchers in the health care industry.

The data presented here are for the physician population practicing in the United States. Detailed characteristics are presented for all physicians with known addresses in a geographic region who are professionally active. In addition, counts of physicians who are inactive or are not classified are provided on each table.

December 31, 1975 was selected as the point in time of this report for the following reasons;

- PL #93-641 was signed in January, 1975, and it was only during 1976 that significant activity was undertaken in response to this legislation. Thus, 1975 represents the last year in which the health care system was not affected by this major piece of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.
- Because this represents the first statistical series of its scope, an exceptional amount of time had to be expended in the conceptualization of the project, preparation of data set, and writing of the necessary computer programs. However, plans are being developed for publication of these volumes on a more regular and current basis in the future.

The introductory material which follows provides definitions and discussions of the geographic aggregations and the specific physician characteristics tabulated. This publication's relationship to other AMA publications and to other data sources is detailed. In addition, the *American Medical Association Physician Masterfile* is described; a list of the health service areas covered in this volume is given; and a sample of the questionnaire which is sent to physicians for the purpose of updating the *AMA Physician Masterfile* is included. Twenty-one tables listed in the Table of Contents—six national tables, which are repeated in all 51 volumes, and 15 state-specific tables providing: state, HSA, county groups and county data—follow immediately. An additional table which provides medical school data is included for states having medical schools.

the United States and the District of Columbia who were temporarily in foreign countries from all tabulations. All data presented in this publication were developed from the *Association Physician Masterfile*.

Because the primary concern of health care planners, in most instances, is to provide care services to meet the needs of the population, many tables report Federal physicians separately. In some geographic areas, the inclusion of Federal physicians in the total may provide an upward bias to the real services available to the general population.

Geographical Units of Analysis

Each volume of COP represents data for the United States as a whole; for the particular states; for county groups, health service areas, and counties within each state. Each physician is allocated to a geographic location on the basis of his or her mailing address as recorded in the *Masterfile*.

The geographical subdivisions are described in the following additional explanations. These are presented below.

County Group

The county group tables (Table A) are based on the Demographic County Classification System of Sales & Marketing Management, Inc.'s Standard Metropolitan Statistical Areas (SMSA) definitions. The SMSA's serving size groups 6 through 9 are based on the county area concept established by the U.S. Department of the Budget.¹ An SMSA consists of 1) a central city of 50,000 or more persons; 2) the remainder of the county in which the central city is located; and 3) contiguous counties which are economically and socially with the central city. The group 5 counties are included as "Potential SMSA's" as defined by Sales & Marketing Management, Inc. and are not eligible for SMSA status. Tables 1 through 4 include counties in rural areas. Table A below summarizes the county group classifications.

The independent cities of Baltimore, Maryland; Alexandria, Virginia; and Chesapeake, Virginia are treated as individual counties and assigned to the county group on the basis of the city's location.

¹Sales & Marketing Management, Inc. and the U.S. Department of the Budget use identical SMSA definitions except in Maryland where the former uses the county and the latter the township as the geographic boundary. Since the county is the geographic boundary in all other states, the county is used in this publication.

0 States and D.C.

		299	3,084	214
9	Counties in SMSA's with 5,000,000 or more inhabitants	3	16	23
8	Counties in SMSA's with 1,000,000 to 4,999,999 inhabitants	34	170	66
7	Counties in SMSA's with 500,000 to 999,999 inhabitants	37	128	26
6	Counties in SMSA's with 50,000 to 499,999 inhabitants	184	330	40
5	Counties considered potential SMSA's	41	51	4
4	Non-Metropolitan counties with over 50,000 inhabitants		229	17
3	Non-Metropolitan counties with 25,000 to 49,999 inhabitants		484	16
2	Non-Metropolitan counties with 10,000 to 24,999 inhabitants		907	14
1	Non-Metropolitan counties with under 9,999 inhabitants		769	4

ties defined as independent are included in "number of counties" column.

Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S., 1976* (Chicago: American Medical Association, 1977), p. 32.

dent cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Princess Anne County in Virginia is referred to as Virginia Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into each county group based on the population of each judicial division.

Service Area

The National Health Planning and Resources Development Act of 1974 mandated the division of the country into health service areas. One section of this report, Tables 16-18, presents data on Non-Federal health service areas located entirely or partially within the state covered in this volume. States with only one health service area within their boundaries have one table for each health service area. In states where the entire state is designated a health service area, only one table is presented. Existing *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1976, issue of the *Federal Register* and incorporate revisions by the Department of Health, Education, and Welfare through July 1, 1976. In most states, HSA's

consist of an aggregation of counties. In some states, however, (Alaska; Connecticut; Massachusetts; Illinois; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations) health service areas were not composites of counties, but rather politico-legal boundaries. The exact political boundaries for each HSA are listed in Exhibit A.

County

Selected characteristics of physicians by county for each specific state are listed in Tables 19-21. If no physician is located in a county, that county is not listed in the tables. For some states, noncounty geographic areas are treated as counties where the geographic subdivisions used differ. This usage parallels the usage in the county group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; Hampton, Virginia; and Chesapeake, Virginia are treated as individual counties. All other independent cities, largely those in Virginia, are incorporated into the county which encompasses it. Princess Anne County in Virginia is referred to as Virginia Beach city. Kalawao County in Hawaii is combined with Maui County. The four judicial divisions of Alaska are treated as counties.

Physician Characteristics

The distributions of physicians are described in this volume in terms of a number of professional characteristics, with some individual characteristics cross-tabulated with others. Key characteristics include specialty, major professional activity, age, sex, board certification, Federal or Non-Federal employment, and state and county of graduation. The thirty-six specialty classifications used in this publication are the same as those used in other AMA publications such as the *Physician Distribution and Medical Licensure in the U.S., 1976* and are presented in Table B. A physician's specialty classification is defined as that in which he/she reports spending the largest number of practice hours. A number of county tables utilize the classification system of primary care/non-primary care specialists. Primary care physicians, for the purposes of these tables, are physicians whose specialty is general practice, family practice, internal medicine, pediatrics, and obstetrics/gynecology. Another area of general interest is specialty board certification. Certification indicates that the physician has satisfactorily completed an examination in an area of specialization and has taken all

of the specific training requirements for certification on a specialty board.² The licensed physician is board certified or not. Tables 1 and 2 indicate board certification in some specialties, but not necessarily the specialty in which the physician is classified. However, over 90 percent of physicians reported as board certified are certified in the specialty in which he/she is classified.³

Physicians' professional activity is reported by specialty to assess the availability of patient care. Professional activity is reported by specialty and by subgroups of patient care on the basis of the type of patient care provided.

² "The boards are in no sense educational institutions. A certificate of a board is not to be considered a license on any person legal qualifications, privilege to practice medicine or a specialty. The boards do not exist with or limit the professional activities of a physician. They do not do they desire to interfere in the regular practice of a practitioner of medicine." Liaison Committee on Medical Education, *Directory of Accredited Residency Programs* (American Medical Association, 1978), p. 1.

³ *AMA Physician Masterfile, 1976*. Specialty Certification Survey and Data Resources, American Medical Association.

semi-retired, permanently disabled, temporarily practice, or not active for other reasons. Physicians are categorized as not classified are those for whom the AMA has not received any information as to date of practice and present employment.

Two of the two other classifications used in describing physician characteristics are: Age as defined in 5-year intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 74, and 75 and over; Federal employment as defined by the Veterans Administration, the U.S. Public Health Service, and the U.S. Postal Service.

Physician medical education background of physicians is described in several forms. Physicians who graduated from United States medical schools are categorized by year of graduation and the state in which they currently are practicing medicine. In addition, physicians are categorized by particular county group or county within a state, cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in another state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Through previous AMA publications, *Physician Characteristics and Medical Licensure in the U.S.*, and *School Alumni*, have reported similar information. *Characteristics of Physicians* provides more detail than previously available in published

This publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for age distributions, sex, and specialty board certification by state, county groups, individual counties, and health service areas. Thus, this publication is designed to meet a more extensive set of data needs not met by other AMA publication series.

This publication is a collection effort to provide information comparable to the data published in *Characteristics of Physicians* being undertaken by the Cooperative Health Statistics System (CHSS). Although this system eventually will collect data on a state-by-state basis for thirty health related occupations, reports published as part of the CHSS have not contained the level of detail

as this publication. And indeed the CHSS is collecting physician data for only a limited number of states at this time.

INTERPRETATION OF TABLES

Because of the complexity and detail of the data presented in these volumes, care must be exercised in their interpretation. A few explanatory comments are necessary about the treatment of the data and the classifications used in these tabulations.

As mentioned previously, it was felt that data on professionally active physicians would be most useful for research and planning purposes. At the same time, however, it was felt that the total pool of physicians should be represented in these volumes. This dual purpose caused some problem in the design of certain tables because of the inactive and not classified categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. General tables in which specialty is cross-tabulated with professional activity, the inactive and not classified physicians are included in the total value but are not distributed by specialty. Instead, these two categories are provided at the bottom of the specialty column as "Inactive," "Non-classified," and "Unknown". To arrive at the total value, the inactive and not classified values should be added to the total of the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 19.

Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes. Again, this data is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore, the grand total value on Table 1 exceeds the total value on Table 2 plus the total in Table 3, and the total value on Table 4.

Availability of Data

This concludes the description of data covered by the COP series. Every effort has been made to provide the most frequently requested information in a format meaningful to most users. These data are available in the form of print tapes from the Bureau of Health Manpower. In addition, plans are underway to publish the COP series on a regular basis.

* These observations are based on a comparison of the data in the *Annual for Massachusetts* and the *Characteristics of Physicians in Massachusetts*.

the data undergo constant review and have considerable changes each year. A masterfile of physicians has been maintained by the Association since 1915. However, in the early days of its existence, the *Masterfile* was primarily a listing of physicians and as a record-keeping device for membership and other purposes. Decisions were made on a day-to-day basis without a unified approach and without consideration of what these decisions would mean in terms of statistical methods and interpretation of the data.

Research activities within the Association became more sophisticated, the complexity of data requirements increased, and the *Masterfile* was, therefore, expanded and modified to meet these requirements.

Today, the *AMA Masterfile* is the most comprehensive and authoritative source of physician data in the United States. It contains information on every physician in the country, whether a member or non-member of the Association, on all types of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet the accreditation standards for primary recognition as physicians. Thus, all physicians comprising the total U.S. manpower pool are included on the *AMA Masterfile*.⁶

Information is started on each individual upon entry into medical school or, in the case of foreign and Canadian physicians, upon entry into the U.S. As a physician's medical and career develops, additional information is added to the file—e.g., internship and residency training, board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to constant change. These types of characteristics are in the "historical" portion of the *Masterfile*. In addition, there is the "current professional activities" portion of each physician's record that identifies his current address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

In 1966, physician classification by specialty, geographic location, and employment was made through the introduction of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

veloped by the American Medical Association. This ongoing work on physician classification meets the need for data on...geographic location, age, sex, and specialty. For principal activity, however, the AMA inquires about major activity without specifying as to direct care of patients. Queries relating to the number of patient hours worked in each activity are made, but manpower cannot be properly allocated to different activities.

This recommendation gained extensive consideration in 1966 when the then AMA Department of Research, which has been replaced by the Division of Statistical Analysis and is now a part of the Center for Health Services Research and Development, began its efforts to update, improve, and evaluate the *AMA Physician Masterfile*. In its evaluation of the *Masterfile* base, it identified four major limitations in the classification system:

1. Existence of categories which were not mutually exclusive, resulting in confusion and overlap between and within activity, specialty, and employer categories.
2. Lack of a criterion upon which to base classification.
3. Lack of information on the most recent activity for each individual record.
4. Unavailability of information on response for the annual verification questionnaire.

These deficiencies were of sufficient concern to require major revisions in both the structure of the *Masterfile* and data collection procedures. Therefore, a four-year project (the Reclassification of Physicians Project) was initiated to redesign the classification system. The AMA undertook the Reclassification Project in cooperation with the National Center for Health Statistics, the United States Public Health Service, the National Demographic Surveys of the U.S. Bureau of the Census, and knowledgeable researchers in academia.

The first step in reclassification was the revision of the format of the 1966 edition of the *Dist. of Physicians, Hospitals, and Hospital Beds*, a publication of the AMA Center for Health Services Research and Development. Through a series of computer programs, the old *Masterfile* category "private practice/not in private practice" was converted to the more meaningful "patient care/other professional activity."

The 1966 format changes constituted a step in the right direction, an important deficiency in the public file of the physician population remained: data were being collected under the old classification system. It became obvious that the data collection procedure had to be revised to correlate with the new classification system.

⁶ This work draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S.*, 1976. Chicago: American Medical Association, 1977.

⁷ Results of validation studies conducted on the *AMA Physician Masterfile*, see Goodman, L.J., and Eisenberg, B.S., "The Accuracy of Physician Data." *Public Data Use*, 5 (May 1977): pp. 1-10.

EXHIBIT A:

HEALTH SERVICE AREA DESIGNATION JULY 1, 1976

The National Health Planning and Development Act of 1974 (PL #93-641) man health service areas be established throug United States. The legislation specified that e service area meet the following requirements:

1. The area must be a rational geograph containing a comprehensive range of h vices, and of a character suitable for th planning and development of health ser

⁷Committee on Interstate and Foreign Commerce, *National Health Policy, Health Planning and Resources Development Act of 1974*, Report No. 93-1382. (Washington: Government Printing Office, 1974).

metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.

To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

205 Health Service Areas designated in July 1976 *
The definitions used in this publication. A listing of SMSA's and the counties, towns, or cities comprising for the state treated in this volume follows below.

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your current activities.
2. **Indicate any changes.** Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.
3. Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- I. Professional Activities—the types of activities in which each physician spends the most time during an average week.
- II. Specialization—the time physicians spend in their major fields of specialization.

EXHIBIT
PHYSIC
PROFES
ACTIVIT
QUESTIO

as an intern or resident? Indicate whether you are a(n)

1 ☐ INTERN 2 ☐ RESIDENT.

(If you checked either of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)

1
2
3
HRS. HRS.

2. How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.

Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.

4
HRS. HRS.

3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?

Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.

5
HRS. HRS.

4. How many hours per week do you spend on MEDICAL TEACHING?

Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

6
HRS. HRS.

a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

7
HRS. HRS.

In view of possible overlap of hours spent in teaching and research, please do not double-count such hours, but report them instead in the most applicable category.

5. How many hours per week do you spend on MEDICAL RESEARCH?

All phases of investigating medical problems regardless of source of funds for such research.

a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

8
HRS. HRS.

9
HRS. HRS.

6. How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE of patients?

10
HRS. HRS.

7. How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?

11
HRS. HRS.

8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)

12
HRS. HRS.

If you indicated "zero" on question 8, or if none of the above categories apply to you, please answer question 9.

9. Are you: 1 ☐ RETIRED 2 ☐ SEMI-RETIRED

3 ☐ PERMANENTLY DISABLED

4 ☐ TEMPORARILY not in practice

5 ☐ Not active for other reasons (please describe) _____

Total of Section I,
equivalent to total of
Section II, and total of
Section III, respectively.

Please cross out any prior information which is not applicable.

Primary

Secondary

Third

III. PRESENT EMPLOYMENT STATUS

Please indicate the current number of hours spent per week for the following types of employers. (Note: employer should **NOT** be confused with the physical location of where your hours are spent.) Please answer EVERY question 1-10. If you do not spend any hours for any one of the following employers, so indicate by entering zero (0) hours.

		HOURS PER WEEK	
		Prior Census	Change If Any
1. Self: "solo" practice	HRS.	1	HRS.
2. Self: partnership practice	HRS.	2	HRS.
3. Arrangement with other physician(s): non-group	HRS.	3	HRS.
4. Group practice	HRS.	4	HRS.
5. MEDICAL SCHOOL (or parent university)	HRS.	5	HRS.
6. NON-GOVERNMENTAL hospital	HRS.	6	HRS.
7. City or county government	a. HOSPITAL	7	HRS.
	b. OTHER than hospital.	8	HRS.
8. State government	a. HOSPITAL	9	HRS.
	b. OTHER than hospital.	10	HRS.
9. U.S. government	a. HOSPITAL	11	HRS.
	b. OTHER than hospital.	12	HRS.
↓			
Indicate Federal Agency:			
1 <input type="checkbox"/> Army	4 <input type="checkbox"/> Public Health Service (C.C. & C.S.)		
2 <input type="checkbox"/> Navy	5 <input type="checkbox"/> Veterans' Administration		13
3 <input type="checkbox"/> Air Force	6 <input type="checkbox"/> Other _____ (SPECIFY)		
10. OTHER ORGANIZATION—Not listed above			
(all types of insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.)			14 HRS.

If the address printed at right is NOT correct, please make appropriate changes in space provided.

b. Your *Professional Address only?* . . .

(If so, please enter your *HOME* address in space following (c) below and proceed to Question 2.) ☐ 14

c. Your *Home Address only?*

(If so, please enter your *PROFESSIONAL* address in following space.) ☐ 15

(STREET)	16-43
(CITY, STATE, ZIP)	44-73

2. Please indicate at which address you wish to receive *medically related* material:

Professional Address ☐ 13

Home Address ☐ 14

3. Please indicate below the county and state of your HIGH SCHOOL graduation if in the United States or Possessions.

(County) 15-17 (State) 18-19 20-21

If already provided, please verify following:

(County) (State)

GROUP NAME

ADDRESS

CITY-STATE-ZIP

4. Please supply the following information:

Social Security No.: _____ 22-32

Age: _____ 33-35

Sex: ☐ 36 ☐ 37
Male Female

Race: ☐ 38 ☐ 39 ☐ 40-41
White Black Other
